

LOOK-C

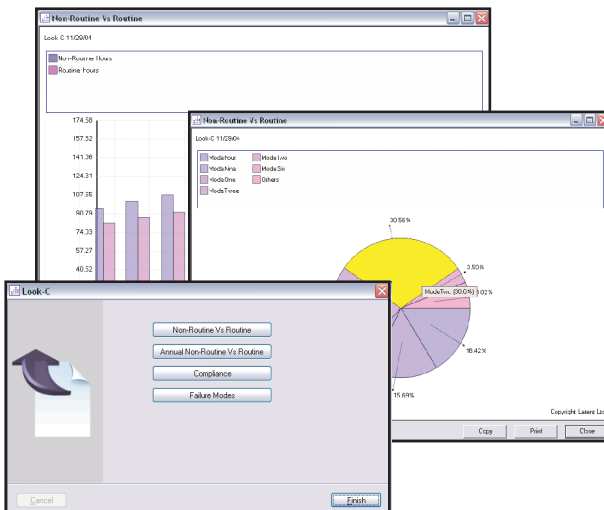

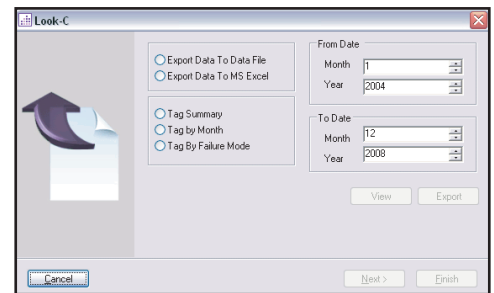

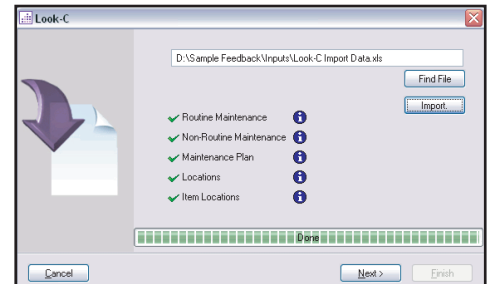

MAINTENANCE ANALYSIS FEEDBACK LOOP

PRODUCT DESCRIPTION

Look-C is a historical maintenance performance review package. It measures equipment performance through analysis of MMS (Maintenance Management System) data. An open loop feedback system enables reporting to predefined scorecards or bespoke client specifications.

TOOL KEY FEATURES

- Measures Availability, Compliance, Non-Routine To Routine Ratio, Failure Rate, Failure Modes, And Mean Time To Repair As Standard
- Analysis Performed In Minutes, Even For Large Data Downloads
- Optional Direct Link Into Maintenance Databases (No Additional Formatting Or Verification Required)
- Links To The Profi-C (Latent Ltd Modelling Package) For Benchmarking Of Results
- Performs Analysis For Any Selected Time Period
- Non-Maintenance Time Can Be Included
- Can use MS Excel and MS Access for Import And Export of Data
- Independent Reviewing Of Results Within Package

BENEFITS OF LOOK-C

- Strategic control of budget
- Efficient analysis covering all equipment rather than cherry picking
- Direct linkage from maintenance databases negates requirement for manual formatting and verification of data, thus saving time and reducing human error
- Downloads in common file format enabling fast links to other software packages.
- Output data suitable for use directly in bespoke instances such as maintenance review programs(RCM)

WHO COULD BENEFIT FROM THIS TOOL?

This package is designed for use in Brown Field Assets(one or more years old). It can be applied to the measurement of incentivised contracts, review and improvement programs, root cause analysis, reliability centered maintenance and management reporting of maintenance effectiveness (scorecards).
